SEEDS • BULBS • PLANTS

To professional horticulturists and garden enthusiasts we present our Spring 1940 Catalog.

We hope browsing through its pages will afford helpful suggestions and enable you to capture the enduring beauty in gardens that turn out as you desire them.

Surely few creative activities at like expenditure afford such fascinating diversion, physical well-being and mental relaxation.

Identical quality is the only true basis of price comparison. In planning your budget keep in mind no initial saving can compensate for the ultimate disappointment that follows the use of inferior stock.

We maintain contact with available estate superintendents, farm managers, gardeners, and greenhouse assistants. We recommend only those we know to be competent men and whose references bear thorough investigation. The facilities of this service are extended to employer and employee—without charge.

COLLECTION
of
New Hardy Phlox

When one mentions Hardy Phlox many people think of leggy, sprawling plants with clusters of lavender-mauve flowers. The development has been tedious and difficult, but with the newest introductions for 1940 we offer a compact, sturdy plant two to three feet high. The flower heads are full and rounded and the individual florets are twice the usual size, with a complete range of beautiful colors and long flowering season.

We unhesitatingly recommend the above for perennial border and flower garden planting.

DR. KLEM. A very striking and distinct variety of dwarf compact, healthy growth. The trusses are good size. Color clear light blue with large deep blue center.

EVA FOERESTER. Giant bright salmon-rose florets with large white centers combine to form immense trusses on dwarf compact plants.

FLASH. Unusually attractive carmine-crimson flowers with orange-scarlet center. Freely produced on vigorous plants of medium height.

HARVEST FIRE. Tall, vigorous, upright healthy grower, producing immense, well-formed trusses of bright salmon-red flowers with distinct carmine eyes.

MARIE LOUISE. Similar to above, but color is pure white.

NEW BUTTERFLY BUSH BUDDLEIA, Orchid Beauty

A splendid new variety of a soft cattleya-lilac color with a brilliant orange eye. Somewhat similar in color to the well known variety Fortune, but differs from it in its long tapering spikes, similar in form and size to the popular Charming. A real addition to the Buddleias. Doz., \$13.50.

BUDDLEIA DUBONNET

The firm, full cylindrical spikes do not burn in the sun. The color is new in Buddleia and one that is momentarily very much in demand. As the name implies, it is the exact color of the French wine, a lovely soft sparkling red. Doz., \$9.00; 100, \$72.50.

BUDDLEIA, Charming

Vigorous and very free flowering, producing a profusion of large pink trusses which hold their pink color throughout the summer and fall and also under artificial light. Picturesque in the garden and extremely valuable as a late summer cut flower. Young plants set out in spring quickly attain a height of 4 to 6 feet and about 4 feet in diameter. We suggest pinching off the first flower spikes in July so that the side shoots will develop and bring better flowers later on in the season. Doz., \$7.00; 100, \$50.00.

CHRYSANTHEMUM FIVE NEW CUSHION TYPES

For bedding and mass effect in the borders where sweeps of color will effectively brighten up your garden for fall.

King Cushion. Identical to Amelia. Deep salmon-bronze, suffused old rose.

Pygmy Gold. New. Miniature flowers an inch in diameter cover this dwarf Korean Pom from early September to hard frost. The clear golden yellow flowers in such profusion creates a striking effect in mass plantings.

Queen Cushion. Pure white, cushion type. Similar to Amelia and King Cushion.

White Gull. Less than a foot high, the plant in flower resembles the Azaleamum. The flowers are smaller and the plant more symmetrical and compact. Pure glistening white from early September to frost.

CHRYSANTHEMUM RUBELLUM TWO NEW EARLY FLOWERING

Clara Curtis (Pink September Daisy). This very showy September flowering pink hybrid of Chrysanthemum Erubescens (now named Rubellum) is a real acquisition. Hundreds of 2- to 3-inch, rosy pink flowers cover the compact, shapely plant for more than a month. It is perfectly hardy. Doz., \$5.00; 100, \$42.50.

Elizabeth Cowill. Those who have grown the dainty rosy pink variety Clara Curtis, will appreciate Elizabeth Cowill, which is of somewhat more upright growth and produces a great profusion of deep clear lilac, single flowers in early October. This variety is perfectly hardy and the flowers have proven frost resistant. Doz., \$9.00; 100, \$67.50.

DAHLIA - Dwarf Bedding

Eleanor. A real acquisition. The 4- to 5-inch decorative flowers are produced in great profusion throughout the summer months and until checked by freezing. The plant seldom grows over 15 inches high and the foliage is practically hidden by the brilliant orange-crimson flowers. Doz., \$9.00.

CHRYSANTHEMUM, Spoon

DELPHINIUM

Pink Sensation. (Patent Rights Reserved.) A most interesting novelty and one sure to become extremely popular. The plant is very vigorous, mildew free, and grows to a height of about 4 feet. It resembles the Belladonna type in appearance of the foliage and size of the individual blooms, and as the spikes have many laterals, the display is much enhanced. The flowers appear in early June and repeat almost continuously until autumn. Light rose-pink, a color previously unknown in Delphiniums. Perfectly hardy. Doz., \$18.00.

FUCHSIA RICCARTONI

Scarlet Beauty. After growing thousands of seedlings in an effort to discover a hardy Fuchsia, some twelve years ago, one plant survived a very severe winter. From this one plant a sufficient stock has been propagated to offer this remarkable novelty in quantity this spring. The plant is upright and branching in habit, about 3 feet high. It is in continuous bloom from late June to frost, producing thousands of flowers 1½ inches long, deep rose-red with corolla of mulberry-purple. The outstanding plant novelty for 1940. Doz., \$7.50; 100, \$60.00.

FUCHSIA, Scarlet Beauty

GLADIOLUS

Oregon State. Expert Gladiolus judges describe this new Gladiolus as a greatly improved Picardy. **Oregon State** has more and larger flowers open, in perfect condition, at one time than Picardy, but of the same robust habit. The color is less harsh than Picardy and in place of Picardy's contrasting blotch, **Oregon State** is an exquisite blending of soft peach-pink with cream throat. We recommend **Oregon State** for exhibition, and as an exceptionally fine cut flower. Doz., \$3.50; 100, \$25.00. For complete list of Gladiolus, see pages 112 to 116.

LIATRIS

Scariosa alba. A new, pure white variety which grows about four feet tall. Valuable for cutting and should be included in every perennial border. Doz., \$5.50; 100, \$38.00.

September Glory. Selected from a field of fine seedlings as perhaps the best late flowering type. For the first time we offer the plants. Extra long spikes of purple flowers from late August to frost. A real asset in the cutting garden and borders. Doz., \$5.50; 100, \$38.00.

Kennedy Kwality Lawn Grass Seed

For Permanent Lawns of Putting Green Texture

HOW TO MAKE A LAWN

The ground should be thoroughly prepared: that is, the soil should be fertilized, then turned over to a depth of six inches and pulverized. Sow good seed (which is very essential) roll the ground and cross roll in order to press the seed firmly into the soil. The proper time to sow grass seed depends upon the latitude. In the central and eastern states seed may be sown from March 1st to the end of June. Seed may be sown in the fall, from the first part of August to the end of October. Sow, if possible, when the ground is moist. For seeding a new lawn use 5 to 6 bushels to the acre.

KENNEDY'S BENTURF

Reg. U. S. Pat. Off.

Lawn Grass Seed Mixture

(Bent Formula)

The popularity of golf in recent years has made comparison of lawns and putting greens an easy matter. One hardly expects his lawn to look as perfect as a putting green, but this is possible if sown with Kennedy's Benturf Lawn Grass Seed Mixture. With reasonable preparation and care excellent results have been accomplished with our Kennedy's Benturf Lawn Grass Seed Mixture which contains a large amount of Bent seed. This makes a compact, rapid growth, forming a close sward withstanding wear and tear. Lb., \$1.50; 5 lbs., \$7.00; 25 lbs., \$32.50; 100 lbs., \$125.00.

KENNEDY'S KARPETURF

Lawn Grass Seed Mixture

This mixture is comprised of some of the quick germinating grasses as well as larger proportions of the permanent, deep rooted varieties. It has been tried in a great many sections of the country and has given excellent results where a quick cover was desired and has proven particularly adaptable for sowing on old lawns which have become shoddy and in need of renovating. Lb., 65c; 5 lbs., \$3.00; bu., \$11.50; 100 lbs., \$55.00.

KENNEDY'S

PUTTING GREEN MIXTURE

This mixture is made up of deep rooting permanent grasses with a view of forming a close turf which will stand being played on a great deal without showing any wear and tear. Bu., \$20.00; 100 lbs., \$95.00.

KENNEDY'S GREENTURF

Lawn Grass Seed Mixture

(Formerly Kennedy's Green Velvet)

This is the lawn grass seed mixture which for over 25 years has seeded many of the most beautiful lawns in America under the name of Kennedy's Green Velvet Lawn Grass Seed Mixture. Recently worthless mixtures bearing the trade name "Green Velvet" have been marketed to the confusion of our patrons. To avoid this confusion we have changed the name to KENNEDY'S GREENTURF LAWN GRASS SEED MIXTURE. The seed in this mixture is all recleaned and especially adapted to withstand the heat and drought of the summer. When properly sown and cared for GREENTURF will produce a beautiful green lawn the entire season. Lb., 80c; 5 lbs., \$3.75; bu., \$14.50; 100 lbs., \$70.00.

KENNEDY'S KWIKTURF

Lawn Grass Seed Mixture

Where a quick turf is desired which will remain green with a minimum of care and attention we recommend this mixture which is composed of deep rooting, strong growing grasses. Lb., 55c; bu., \$9.00; 100 lbs., \$45.00.

KENNEDY'S SHADETURF

Lawn Grass Seed Mixture

This is a mixture of extra fine grasses adapted for growing in the shade and under trees. We recommended the use of this mixture wherever other grasses, on account of shade, have failed to make a close sward. Lb., 85c; 5 lbs., \$4.00; bu., \$15.00; 100 lbs., \$75.00.

KENNEDY'S TENNIS COURT MIXTURE

The hardiest and finest low-growing grasses are contained in this mixture. It produces a beautiful and lasting green turf calculated to withstand hard wear and tear. Bu., \$20.00; 100 lbs., \$95.00.

SOUTHERN Lawn Grass Seed Mixture

A mixture prepared for Southern lawns and contains grasses best adapted for dry, hot sections in the South where many of the grasses will not thrive. We recommend seeding in the spring and fall. 100 lbs., \$60.00.

KENNEDY'S TERRACE MIXTURE

A mixture of strong, deep-rooted grasses for banks and terraces. Although the grasses are strong and deep-rooted, they will produce a fine, green velvety surface, and also prevent washing away during heavy rains. Lb., 85c; 5 lbs., \$4.00; bu., \$17.00; 100 lbs., \$80.00.

LAWN CLOVER—Dwarf White

The only variety suitable for lawns. Very dwarf and of a spreading habit. We advise sowing White Clover separately on account of the seed being much heavier than that of the finer grass seed. It has a tendency to work to the bottom of the receptacle it is being sown from and consequently the last part of the grass seed sown has a greater percentage of clover than the first. Lb., \$1.35.

Kennedy's Long-Stemmed Imperial Giants

The Pansy has been a garden favorite since the middle of the 17th century. In recent years, hybridizers have developed the size of flower and length of stem to such an extent as to make descriptions inadequate. To convey a true picture of the infinite perfection of form, range of color, texture of petals, and length of stem, produced by our mixture of Long-Stemmed Imperial Giants, is impossible.

Several years ago we offered Kennedy's Long-Stemmed Imperial Giants in mixture only. With their free-flowering habit and wide range of sombrous shades of soft velvet, we do not hesitate to proclaim Kennedy's Long-Stemmed Imperial Giants the finest Pansies in cultivation today.

We now offer this same strain in fixed named varieties, in addition to the mixture. Because the best flowers are shy seeders, the price of a good strain is necessarily high.

Kennedy Quality Bulbs

BEGONIA (Tuberous Rooted)

Although there is much to be gained in early blooming by starting the tubers in pots indoors, the dormant bulbs may be planted 10 inches apart in the open ground during May with excellent results. They will thrive in partial shade. Planted on the north side of a house they will make a beautiful show and in places where hardly any other flower will bloom satisfactorily.

IMPORTANT NOTICE

For approximately twenty-five years Begonias and Gloxinias have been grown in America since the plant embargo prohibited importations. Sources at home have produced new types, colors and sizes superior in every respect to previous importations. The embargo has been lifted and foreign grown bulbs are available, although delivery seems uncertain as a result of the war.

These varieties and prices are for American grown stock and will naturally seem more costly unless comparison of the sources and quality is taken into consideration. However, we will gladly accept orders for foreign grown stock at prices quoted by reputable dealers.

POMPON DAHLIAS

POMPON OR BOUQUET DAHLIAS

From year to year we have added new varieties to our list of Pompons until there is considerable duplication which only results in confusion when a selection of Poms is to be made.

After a survey of the Dahlia Shows and trials this fall we have decided to confine our list to the best dozen Pompons available today. Recent introductions have the following to recommend them over their predecessors.

A longer, wiry stem, sometimes reaching 24 inches. All the newer varieties are characterized by a reduction in the size of flower and a perfection of form and placement of petals. Lastly, the colors are truer and more distinct. For example, we do not hesitate to recommend Betty Anne as an ideal pink Pompon embracing all of the foregoing desirable traits without any faults we can discover.

We suggest a careful consideration of the following list with the descriptions and advise your replacing some of the old ones with these new perfected types.

Betty Anne. Perfect mauve-pink, one inch, not a trace of white. 50c.

DWARF DAHLIA PLANTS

Strong young plants only, ready at planting time in May.

This wonderful new race of dahlias has remarkable value for garden planting though they are not less desirable for cutting. Kennedy Kwality Exhibition Gladiolus

OUR GLADS ARE FREE FROM THRIP!

Due, no doubt, to scientific treatment of planting stock for years our Gladioli have always been free from thrip. As an added precaution and to be sure that bulbs supplied by us are absolutely free from this pest, we will also scientifically treat our bulbs again before shipment is made to our customers.

Inasmuch as thrip lives in the soil, as well as on the bulbs in storage, through the winter, it is imperative that our bulbs be planted on soil where Gladioli were not grown last year and not close to other Gladioli from other sources.

We guarantee our bulbs to be the largest size and well matured, which is absolutely essential for producing exhibition flowers.

Dear Sirs:—

You have, no doubt, read accounts of the Gladiolus Exhibit staged at the World's Fair "Gardens on Parade," this summer by me for Mr. J. F. Morgan. You will be glad to learn that all of these flowers were grown from the bulbs you shipped in the spring.

All were free from thrip; and outstanding among the varieties, as judged by the comment and inquiry of the patrons, were Smiling Maestro, Yellow Emperor, and Max Reger.

I pass this information along to you because I am aware of your constant effort to introduce and recommend the best varieties.

Yours very truly,

(Signed) JAMES S. KELLY,
Supt. to J. P. Morgan, Esq.

STANDARD BAY TREES

We are pleased to notify our former Bay Tree buyers, and all our customers that we are again in a position to supply first-class stock of these valuable plants.

These gems of decorative material have been sadly missed from the terraces, porches and close in grounds for the past few years. Nothing has been offered to take their place, as there is nothing that will add as much to the beauty of an estate as a few pair of Bay Trees well placed. The trees we offer are well grown and with good care should become more valuable each year.

Sizes and prices on application.

Kennedy Quality Hardy Everblooming Roses

EXTRA HEAVY 2-YEAR-OLD BUDDED NURSERY-GROWN STOCK

The Roses offered in this list are of the Hybrid Tea class, which are commonly known as Ever-blooming Roses, and are without exception the most desirable for bedding. The stock we offer are extra heavy, two-year-old, budded, nursery grown, which, if planted in the early spring, are guaranteed to bloom from June until frost, and are not to be confused with the stock which has been forced in greenhouses all winter and after being discarded by growers because of weakened condition due to hard forcing, is offered for sale as flowering stock by unscrupulous dealers.

Budded plants are more vigorous, produce more and better flowers, and are more hardy and less susceptible to disease.

These plants can be supplied in dormant stock, on orders placed with us before March 15th, for delivery up to April 15th. From our experience in the past with roses, dormant stock should be planted before April 15th. After this date we offer all the varieties listed below in 6-inch pots.
